How to Copy Marantec Remote from an Old One to a New One

1. **Position the Remotes Properly**

   o   Place the original remote and the new remote close together.

   o   You can position them back-to-back, head-to-head, side-by-side, or overlapping for the best signal transmission.

2. **Enter Learning Mode**

   o   On the new remote, press and hold the button that you want to program (copy).

3. **Transmit the Signal**

   o   While holding the button on the new remote, press the corresponding button on the original remote.

4. **Confirm the Copying Process**

   o   Keep holding both buttons until the LED light on the new remote changes from flashing to a steady light.

   o   This indicates that the signal has been successfully copied.

5. **Test the New Remote**

   o   Release the buttons and test the new remote to ensure the copied function works correctly.
